FACTSHEET

About Us

Gibson Energy (Gibson) is a North American-based liquids infrastructure company headquartered in Calgary, Alberta. With 25.2 million barrels of storage and over 500 km of crude pipelines across North America, we touch 1 in 4 WCSB barrels through GEI terminals. Utilizing this focused asset base, along with our dedicated and talented employees, we help create value for our customers while generating stable, long-term cash flow. Ultimately, our strategically located facilities, combined with our best-in-class market connectivity and a long-term growth outlook, help us connect our customers to markets, our employees to exciting and rewarding careers and investors to long-term value.

Edmonton Terminal Location

Our Edmonton Operations

Terminal Storage

Gibson's Edmonton Terminal is a 24 hour, 7 day operation with full shift operations and maintenance department employing more than 60 people locally with approximately 1.7 million barrels of storage, and an additional 1.3 million barrels coming online in 2024. Our Edmonton Terminal is fully connected to 'pipeline alley', one of the most significant energy transportation hubs in Canada. Fully connected to multiple inbound and outbound pipelines, our facility can also offer customers unparalleled flexibility in getting crude oil, liquids and refined product to market through our connection to major rail lines and truck unloading and loading capabilities.

Rail and Road Connectivity

In addition to storage capacity, our Edmonton facility offers customers the most flexible off-loading and loading infrastructure in the industry, along with receipt and delivery options, using a combination of truck, rail and pipe, to ensure product gets to market safely and reliably. Our Edmonton rail facility connects to both CP and CN rail lines. Currently, our Edmonton Terminal has capacity for loading and offloading up to 120 railcars.

Biofuels Blending

In 2022, Gibson completed the Biofuels Blending Project which involved an expansion of infrastructure to facilitate the storage, blending and transportation of lower-emission renewable diesel. The Biofuels Blending Project demonstrates how our asset base can help support the energy transition and the changing needs of our customers.

Our Commitment to Our Stakeholders and Partners

At Gibson, we energize collaboration and connectivity. This means we are committed to working closely with the communities where we live and work to ensure we are a responsible corporate citizen. With over 70 years' experience, we aim to earn the trust of our stakeholders and communities through open and

honest communication. From our day-to-day operations to the planning and implementation of new projects, our business relies on meaningful engagement with the communities we operate, which include landowners, Indigenous Peoples, regulators, all levels of government, community investment partners and other stakeholders.

STAY SAFE AROUND PIPELINES Call or Click Before You Dig

If you are planning ground disturbance work near a pipeline Right-of-Way, you have an important role to play in ensuring safety. Prior to initiating any type of ground disturbance work, you are required to Call or Click Before You Dig.
